

To whom it may concern

EN 10204 has been prepared under a mandate given to CEN by the European Commission and the European Free Trade Association, and supports essential requirements of EU Directive 97/23/EC.

Inspection certificate 3.1 (type 3.1) is a document issued by the manufacturer in which he declares that the products supplied are in compliance with the requirements of the order and in which he supplies test results. It is validated by the manufacturer's authorized inspection representative, independent of the manufacturing department.

The certificate 3.1 includes information about the product material, such as its composition, mechanical properties, as well as the results of various tests and inspections that were conducted on the product. The intent of the certificate 3.1 is to provide assurance to the customer that the product they are receiving is of the required quality and meets the specified requirements.

The certificate 3.1 is also required for each shipment of same product, you can use own certificate 3.1 format or ours, regardless of which format you use, please put all attachments (material inspection report and raw material certificate) in a PDF file and format the name of the file as " 3.1 certificate-Article no.-PO-Lot no.", example: " 3.1 certificate-0301020106-3886-14th".

So we have prepared a guide to help you with how to fill it out. Please contact us with any questions about filling it out, thank you!
